

DISSECT 2015

CALL FOR PAPERS

The emergence of next generation networking technologies and paradigms, such as cloud computing and software defined networking, has completely transformed the way networks are designed, deployed, and managed, and has brought a multitude of challenges to the spotlight of worldwide research. In this context, security has been one of the areas of major concern and thus research interest, especially with the growing demands of the general public for secure, trustworthy, and privacy-preserving data communication and management.

The main goal of the International Workshop on Security for Emerging Distributed Network Technologies (DISSECT) is to put focus on security issues and challenges arising with the emergence of novel networking technologies and paradigms. The workshop will shed light on new challenges and present state-of-the-art research on the various security aspects of next-generation networking technologies and service management frameworks.

DISSECT will offer a venue for bringing together students, researchers, and professionals from academia and industry sharing common interest on security challenges related to the design and management of the distributed networks and infrastructures. DISSECT is intended to (1) discussing these challenges as well as future trends on security management, (2) present and discuss work-in-progress security-related research on cutting-edge technologies, and (3) strengthening collaboration and research ties among peers.

TOPICS OF INTEREST

In this workshop, the research community from industry and academia will be invited to contribute with manuscripts describing novel, work-in-progress research on the design of solutions to relevant security issues on a wide variety of next generation networking technologies. The topics of interest of the workshop include, but are not limited to

Secure networking architecture design

Intrusion detection and mitigation for emerging networks

Trust and privacy in social networks

Security and trust management in cloud environments

Security challenges on Internet of things

Secure design of software defined networking solutions

Networked, distributed systems security

Networks forensics and auditing

Security and privacy of mobile systems

Privacy-enhancing technologies

Security measurement and analysis

Security "in-the-air" and "in-the-wire"

Security tooling

AUTHOR INSTRUCTIONS

Paper submissions must present original, unpublished research or experiences. Papers under review elsewhere must not be submitted to the workshop. All contributions must be submitted in PDF format via <http://jems.sbc.org.br/dissect2015>.

All papers must be limited to 6 pages in an IEEE 2-column style and will be subject to a peer-review process. The accepted papers will be submitted for publication in the IEEE Xplore Digital Library. Papers will be withdrawn from IEEE Xplore in case the authors do not present their paper at the workshop.

IMPORTANT DATES

Paper Submission Deadline

~~December 15th, 2014~~

January 12th, 2015 (**EXTENDED**)

Notification of Acceptance

January 30th, 2015

Camera-ready papers

February 15th, 2015

ORGANIZING COMMITTEE

Carol Fung

Virginia Commonwealth University

Mohamed Faten Zhani

University of Waterloo, Canada

Weverton Cordeiro

Federal Institute of Para, Brazil
